

SLIVER & ROVING WRAP BLOCK

Two automatic and two manual models for preparing defined-length sliver and roving samples prior to weighing for count determination.

HORIZONTAL AUTOMATIC MODEL

200 mm

Roller width of this model

4.3 inch

Touchscreen on automatic models

m / yd

On-screen selection on automatic models

Prepare for count determination

Designed for sample preparation in laboratory checks of card and draw-frame slivers and rovings. The prepared sample is weighed on a separate balance for count determination.

Four models, two operating modes

Automatic models provide metre or yard selection on screen. The manual range comprises two separate models: one for metres and one for yards.

MODEL RANGE

Choose automatic or manual winding for your workflow.

Classic automatic

4.3-inch touchscreen.
Metre / yard selection on the same unit.

Manual metre / Manual yard

Handwheel-operated winding.
Separate metre and yard models.
